SUMMARY

Determination, Discipline, Flexibility.

I'm Bruno, a **Front End Engineer** experienced with **React**, **Typescript**, **Redux**, and **NextJS**.

I have developed a front-end platform that streamlines complex processes and creates personalized user experience. Ready for my next challenge in a company that is looking for a committed and passionate developer to create great user experience.

PROFESSIONAL EXPERIENCE

2023 – Present: Front-End Developer of MatchUp

I created MatchUp to enable personalized recruitment processes tailored to the candidate and the employer's needs. I am designing a user-friendly interface to help candidates manage complex processes easily, developing the UI components using **React** and **Typescript**, integrating with various 3rd party **APIs** (such as Google, and Facebook) to present real-time information, and working closely with the Back end and AI team to seamlessly create a top-notch platform.

- Improved security and privacy by implementing a strict onboarding process.
- Partnered with Ti-Space to onboard their students and help to improve the success rate.

2022 - 2023 Front-End Developer at [Fullpower Ltd](#)

Fullpower is a digital marketing company focused on creating web platforms that improve business results. I was responsible for developing web platforms using JS, React, and WordPress, led the UI design and implementation of engaging and responsive platforms that helped clients convert more leads, and built a content management system that improve time to market.

- Delivered 20+ front-end platforms for clients and improved their online presence and sales.
- Created a smart login and improved contract execution time by automatically generating contracts.

2019 – 2020: Front-End Developer at Smart Learning

Smart Learning is a platform that enhances students' experience and makes education accessible from anywhere and anytime. I helped to shape the initial development of the Front-End platform, worked with JavaScript, and React to create an engaging user interface, and designed the UI including Wireframing, prototyping, and implementation of various UI components.

- Built the major web app from scratch to production and worked with the learning platform APIs.
- Supported more than 1200 active users.

2012 – 2014: 8200 Unit Sargent, Intelligence Corps, IDF

- During my army I led a technology unit focusing on Quality Assurance for Web platforms.
- Responsibility for access control and data validation processes
- Maintained and followed strict security protocols to enable segregated access to critical resources.

EDUCATION

2019 – 2020: Front- End Development Student at NetCraft Academy

During my studies, I gained experience through projects that bridge the theoretical and practical gap. I specialized in Front-End Development using JS, HTML, CSS, React, and RESTful APIs.

- CRM project using React, NodeJS, and MongoDB that helps manage inventory and download documents.
- E-Commerce website for educational purposes using React and Firebase.
